NIC Mission

- A multi-agency operational center operated by the United States Navy, National Oceanic and Atmospheric Administration, and United States Coast Guard.
- Located in Suitland, Maryland and employs over 50 military and civilian personnel.
- GLOBAL sea and lake ice analysis and forecasting.
- Over 140 International Customers, including SUBFOR, ONI, NOAA, NWS, NSF, USCG, MSC, and NASA.

<u>Mission</u>: Provide the highest quality, timely, accurate, and relevant snow and ice products and services to meet the strategic, operational, and tactical requirements of U.S. national interests across a global area of responsibility.

International Partnerships

North American Ice Service (NAIS)

- Multi-agency partnership between U. S. National Ice Center, Canadian Ice Service and International Ice Patrol.
- Mission: Transform individual organizational strengths into a unified source of ice information and meet all marine ice information needs and obligations of the United States and Canadian governments.

International Arctic Buoy Programme (IABP)

➤ Global participants working together to maintain a network of drifting buoys in the Arctic Ocean to provide real-time operational requirements and research purposes including support to the World Climate Research Programme and the World Weather Watch Programme.

International Ice Charting Working Group

Formed in October 1999 to promote cooperation between the world's ice centers on all matters concerning sea ice and icebergs.

TODAY'S CHALLENGES

- Minimally manned and resourced to meet current mission requirements.
- As a result, must continuously reprioritize support to meet expanding missions in the Arctic by USCG, Navy, and NOAA.
 - Change in type and number of missions to support (non-ice hardened ships and icebreakers).
 - Expanded forecast needs (5-7 days, 1-3 months, 1 year, 5-10 years).
 - Detailed ice information at high spatial resolution: type, thickness, age, movement.
- Availability of broad-based ice information.

In order for NIC to plan, resource and provide operational support to its customers, those customers must clearly articulate their ice product requirements for current and future missions.

Summer Minimum Sea Ice Conditions

FUTURE MISSION REQUIREMENTS

- Strengthen partnerships and collaboration with other Arctic countries on safety of navigation, cryospheric science/research, data collection, and ice charting.
- Increase data sources
 - Real-time operational availability of all-weather, day and night, high resolution Synthetic Aperture Radar (SAR) imagery is crucial.
 - Improved coverage of the high Arctic, NWP, and NSR.
 - Distributed seasonal ice buoys and open ocean drifting buoys; hydrographic and atmospheric sensors; and the potential exploitation of UAVs and AUVs
- Improve modeling and forecasting capabilities (OTSR/WEAX)
- More trained ice analysts, ice pilots, and Arctic marine weather forecasters as demand signal for support in the region increases.
- Increased automated analysis and data merging capabilities.
- Continued access to Ice Reconnaissance data and platforms: USCG/NSF icebreakers, D-17/IIP C-130 flights, and Navy/NOAA ships

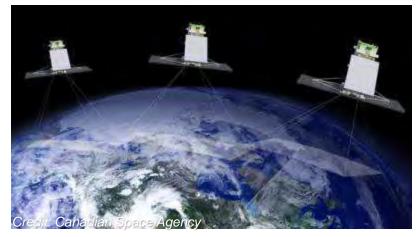

FUTURE SATELLITE MISSIONS FOR ARCTIC MONITORING

ESA Sentinel-1

LAUNCH PLANNED FOR 2013-2015

CSA RADARSAT Constellation Mission (RCM)

LAUNCH PLANNED FOR 2014-2015

CSA Polar Communication and Weather (PCW) Mission

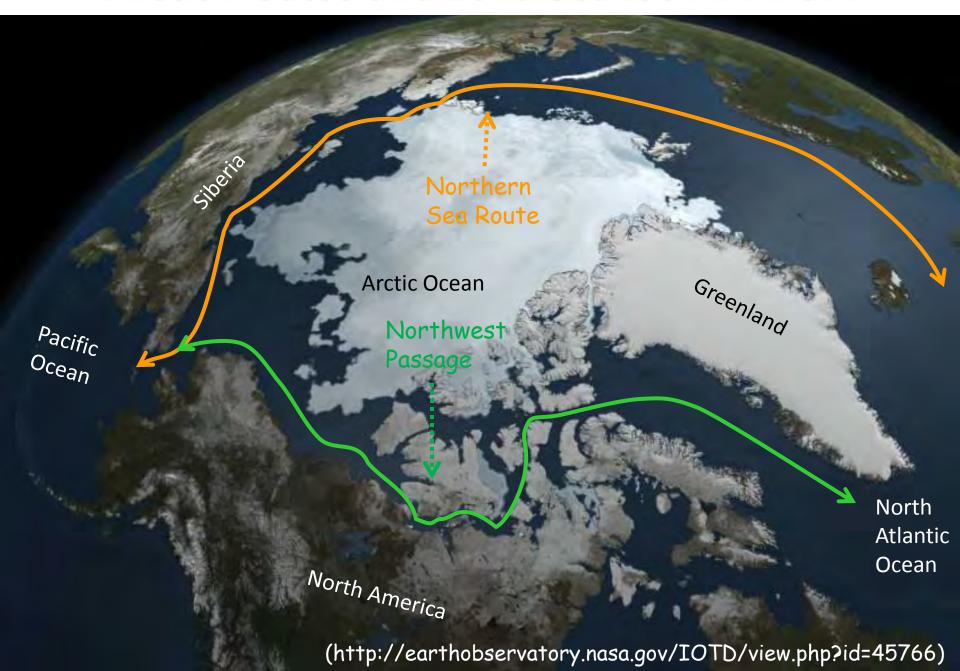

TENTATIVE LAUNCH PLANNED FOR 2016

Questions?

Arctic Routes and 2010 Sea Ice Minimum

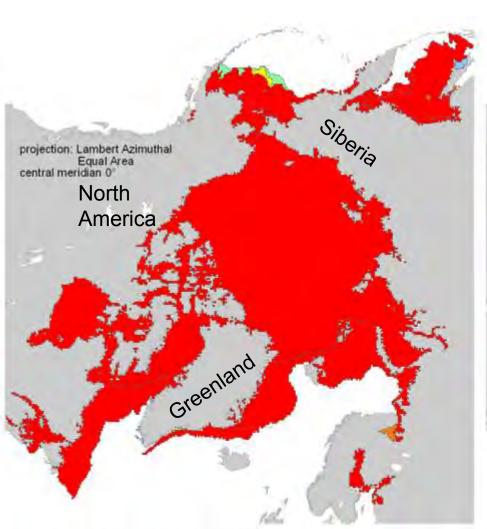

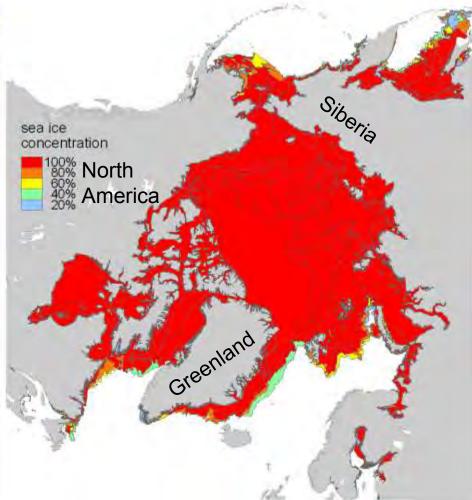

What is next and when???

Increased Detail of NIC Analysis 1979 to 2011

Week of March 26, 1975 15.467 million square kilometers

Week of March 27, 2011 14.969 million square kilometers

Arctic Sea Ice Extent vs. MYI Distribution

March 28, 2010

total ice extent North 15.467 million Ameri square kilometers

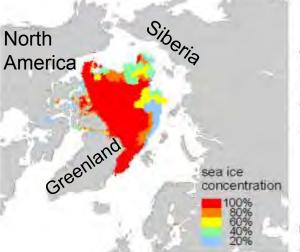

Sept. 26, 2010

total ice extent 5.629 million square kilometers

total Multi-Year ice extent 6.253 million square kilometers

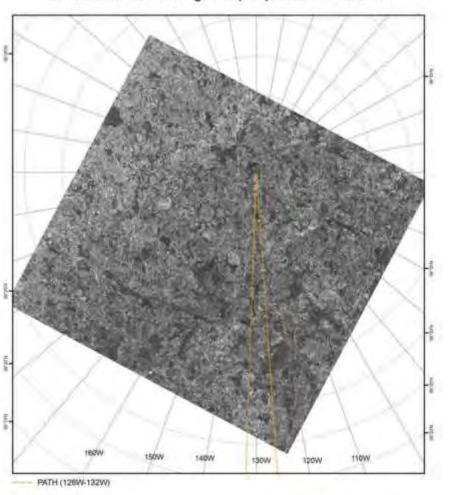

total Multi-Year ice extent 4.769 million square kilometers

projection: Lambert Azimuthal Equal Area central meridian 0°
